

Introduction

Project: Optimizing User, Group, and Role Management with Access Control and Workflows

One of the most important features of this project is the implementation of Access Control Lists (ACLs). ACLs help secure sensitive information by controlling who can create, read, write, delete, or modify records. They ensure that users only access the data they are authorized to view or update, thereby improving security and protecting confidential organizational information.

Another key component of the project is workflow automation. Instead of manually processing access requests, we implemented workflows that automatically route requests to the appropriate managers or administrators for approval. Once the required approvals are completed, the requested roles or permissions are assigned automatically. This reduces processing time, eliminates manual errors, and improves operational efficiency.

This project focuses on creating and managing users, assigning them to groups, defining roles, implementing Access Control Lists (ACLs) to protect sensitive data, and automating approval processes through workflows. By reducing manual effort and enforcing role-based access, the system enhances security, improves operational efficiency, and minimizes errors in user access management.

IDEATION PHASE

Problem statement:

In a small project management team consisting of a Project Manager (Alice) and a Team Member (Bob), there is a need to efficiently manage project tasks and ensure accountability throughout the project lifecycle. The current system lacks clear role definitions, access controls, and a structured workflow, leading to confusion regarding task assignments and progress tracking.

What are the challenges faced without Optimizing User, Group, and Role Management with Access Control and Workflows:

1. Difficulty in managing users, groups, and roles efficiently.
2. Increased risk of unauthorized access due to improper role assignments.
3. Manual user provisioning and approval processes consume more time.
4. Lack of centralized access control leads to security and compliance issues.
5. Difficulty in tracking user permissions, role changes, and workflow approvals for audits.

Objective:

1. Define User Roles Clearly: Establish distinct roles for Alice (Project Manager) and Bob (Team Member) to ensure clarity in responsibilities and access rights within the project management tool.

2. Implement Access Control Mechanisms: Create a system that restricts Bob's access to project creation and editing features while allowing him to view and update his assigned tasks, thereby preventing unauthorized changes.

3.Streamline Workflow Processes: Develop a structured workflow for task assignment and progress tracking, ensuring that Alice can easily assign tasks to Bob and monitor their completion in a timely manner.

Skills:Users, Groups, Roles, Tables, Access Control List, Flow Designer.

REQUIREMENT ANALYSIS

Solution requirement :

Team ID	SWTID-2026-5870
Project Name	Optimizing User, Group, and Role Management with Access Control and Workflows

Functional requirements:

Following are the functional requirements :

FR.No		
FR-1		
FR-2	Core Platform Setup (Users, Groups, Roles)	Creation of Users, Creation of Groups, Creation of Roles
FR-3	Data & Structural Configuration	Create Project Table, Create Task Table 2
FR-4	Access Assignment & Governance Enablement	Assign Roles to Alice (Project Manager),

		Assign Roles to Bob (Team Member)
FR-5	Application Security & Access Enforcement	Assign Table Access to Application, Create ACLs for Task Table 2
FR-6	Automation & Workflow Optimization	Create a Flow to Assign, Operations Ticket to Group
FR-7	Testing & Validation	Workflow Execution Testing
FR-8	Project Conclusion	Conclusion

Non-functional requirements:

Following are the non-functional requirements

FR No	Non-Functional Requirement	Description
NFR-1	Usability	The system provides a simple, intuitive, and user-friendly interface that enables administrators and users to efficiently manage users, groups, roles, permissions, and workflows with minimal training.

NFR-2	Security	The system ensures secure authentication, role-based access control (RBAC), authorization, and encryption to protect user data and prevent unauthorized access to resources.
NFR-3	Reliability	The system performs consistently without failures, ensuring accurate user-role assignments, workflow execution, and uninterrupted access to authorized resources.
NFR-4	Performance	The system provides fast response times for user authentication, role assignment, permission validation, and workflow processing, even when multiple users access the

		system simultaneously.
NFR-5	Availability	The system is available 24/7 with minimal downtime, ensuring users can securely access the application and perform role-based operations whenever required.
NFR-6	Scalability	The system efficiently supports an increasing number of users, groups, roles, and workflows without affecting performance, making it suitable for growing organizations.

Data flow diagram:

Data Flow Diagram (DFD) for the Optimizing User, Group, and Role Management with Access Control and Workflows project illustrates how data moves through the system. The administrator creates and manages users, groups, and roles, which are stored in the database. Access control validates user permissions before allowing access to resources. Workflow

processes handle user requests such as role assignment, approval, and group updates. Finally, the system updates the database and provides the appropriate access based on the assigned roles and permissions.

Users:

- The user logs into the system using valid credentials.
- The user submits requests to create, update, or manage users, groups, and roles.
- The system verifies the user's permissions through access control rules.

DATA FLOW DIAGRAM (DFD) – LEVEL 0

Optimising User, Group, Role Management with Access Control and Workflow

Architecture of servicenow:

- ServiceNow uses a cloud-based architecture that can be accessed through a web browser.
- It stores all application and business data in a centralized database.
- Users interact with the system through a simple and responsive user interface.

- The application layer manages workflows, automation, and business logic.
- Security is provided through user authentication, roles, permissions, and access control.

S.No	Parameter	<u>Description</u>
1.	Problem Statement (Problem to be Solved)	Organizations face challenges in managing users, groups, and roles efficiently. Manual access management leads to security risks, duplicate records, permission errors, and delays in user provisioning and approval processes.
2.	Idea / Solution Description	The proposed solution is a centralized User, Group, and Role Management system in

		ServiceNow that automates user provisioning, role assignment, access control, and approval workflows to improve security and operational efficiency.
3.	Novelty / Uniqueness	The solution provides automated role assignment, workflow-based approvals, centralized access control, and efficient user lifecycle management, reducing manual effort and improving accuracy.
4.	Social Impact / Customer Satisfaction	The system enhances security, transparency, and user satisfaction

		by ensuring timely access, reducing errors, and providing faster approval and access management processes.
5.	Business Model (Revenue Model)	The solution is implemented using the ServiceNow platform and follows a Software-as-a-Service (SaaS) model, enabling scalable and cost-effective enterprise access management.
6.	Scalability of the Solution	The solution is highly scalable and can efficiently manage a growing number of users, groups, roles, and workflows while maintaining

		performance, security, and compliance.
--	--	--

Task initiation

Milestone 1: Users

Activity-1: Create Users

- 1.open servicenow
- 2.go to all search for System Security
 - > Users.
- 3.Click New to create a new user.
- 4.Fill in User Information: o Name: Alice o Role: Project Manager
- 5.Click Submit to create the user.

The screenshot shows the ServiceNow 'User' form for a user named 'Alice O'. The form is divided into two main sections: 'User Information' on the left and 'System Information' on the right. The 'User Information' section includes fields for User ID, First name (Alice), Last name (O), Title, Department, Password needs reset, Locked out, Active, Identity type (Human), and Internal Integration User. The 'System Information' section includes fields for Email, Language, Calendar integration (Outlook), Time zone (System (America/Los Angeles)), Date format (System (yyyy-MM-dd)), Business phone, Mobile phone, and Photo. At the bottom, there are buttons for 'Update', 'Set Password', and 'Delete'. Below the form, there are 'Related Links' (View linked accounts, View Subscriptions, Reset a password) and a 'Related Custom Tables' section with tabs for Roles, Groups, Delegates, Subscriptions, and User Client Certificates. A search bar for 'Role' is also visible at the bottom.

Create one more user:

6. Create another user with the following details Name: Bob Role : Team Member

7. Click on submit.

The screenshot shows the ServiceNow user management interface for a user named 'Bob'. The form is divided into two main sections. The left section contains fields for 'User ID' (filled with 'Bob'), 'First name' (filled with 'Bob'), 'Last name', 'Title', 'Department', and checkboxes for 'Password needs reset', 'Locked out', 'Active' (checked), 'Identity type' (set to 'Human'), and 'Internal Integration User'. The right section contains fields for 'Email', 'Language' (set to 'None'), 'Calendar Integration' (set to 'Outlook'), 'Time zone' (set to 'System (America/Los Angeles)'), 'Data format' (set to 'System (vcard-4.0)'), 'Business phone', 'Mobile phone', and a 'Photo' field with a 'Click to add...' link. Below the form are buttons for 'Update', 'Set Password', and 'Delete'. A 'Related Links' section includes links for 'View latest accounts', 'View Subscriptions', and 'Reset a password'. At the bottom, there is a table with columns 'Table', 'Application', and 'Role'. The table has one row with 'Table' in the 'Table' column.

Milestone 2: Groups

Activity-1: Create group

1. Open service now
2. Click on All >> search for groups
3. Select groups under system security
4. Click on new
5. Fill the following details to create a new group
 - Name: Project Team Group
 - Description: Group for project collaboration
6. Click on submit.

Milestone 3 : Roles

Activity 1: Create roles

1. Open service now.
2. Click on All >> search for roles
3. Select roles under system security
4. Click on new
5. Fill the following details to create a new

Role

- Name: Project Manager Role
- Description: Full access to project and task tables

servicenow All Favorites History Workspaces Admin **Role - Project Member** Search

Role: Project Member

Name: Project Member Application: Global

Restricted privilege: ☐

Description:

Update Delete

Contains Roles Applications with Role (2) Modules with Role Custom Tables

for test Search

Role: Project Member

Contains

No records to display

8

Create one more role:

7. Repeat steps to create Team Member Role with restricted access.

8. Save both roles.

9. Click on submit.

servicenow All Favorites History Workspaces Admin **Role - Team Member** Search

Role: Team Member

Name: Team Member Application: Global

Restricted privilege: ☐

Description:

8

Milestone 4 : Table

Activity 1: Create Table

- 1.Open ServiceNow.
- 2.Click on All → search for Tables.
- 3.Select Tables under System Definition.
- 4.Click on New.
- 5.Fill in the following details:
 - Label: Project Table
 - Name: u_project_table
 - Check the boxes Create Module & Create Mobile Module.
 - Under New Menu Name: Project Table.
 - Define table columns (e.g., Project Name, Owner, Deadline).
- 6.Click on Submit to create the table.

The screenshot shows the ServiceNow interface for creating a new table. The top navigation bar includes 'All', 'Favorites', 'History', 'Workspaces', and 'Admin'. The main header is 'Table - Project Table'. Below the header, there are tabs for 'Columns', 'Controls', and 'Application Access'. The 'Columns' tab is active, showing a list of dictionary entries for the table. The entries are as follows:

Column label	Type	Reference	Max length	Default value	Display
Updated by	String	(empty)	40		false
Updates	Integer	(empty)	40		false
Sys ID	Sys ID (GUID)	(empty)	32		false
Updated	Date/Time	(empty)	40		false
Created by	String	(empty)	40		false
Created	Date/Time	(empty)	40		false
Project Name	String	(empty)	40		false
Owner	String	(empty)	40		false
Deadline	String	(empty)	40		false
Insert a new row...					

Create one more table:

7.Create another table with the following details

Fill in the following details

- Label: Task Table 2
- Name: u_task_table2
- Add required columns (Task Name, Description, Status, Comments, Assigned To).

8.Click on Submit to create the table.

Milestone 5: Assigning users to the roles

Activity-1: Assign Roles to Alice (Project Manager)

- 1.Open ServiceNow.
- 2.Click on All → search for Users.
- 3.Select Project Manager user (Alice).
- 4.Under Project Manager profile, click Edit.
- 5.Select Project Member role and save.

6. Click Edit again and add:

- u_project_table role
- u_task_table role

7. Click Save and update the form.

The screenshot shows the ServiceNow interface for editing a group named "Project Team". The form includes fields for Name, Manager, Group email, Parent, and Description. Below the form are "Update" and "Delete" buttons. The "Roles" tab is active, showing a list of group members with a search bar and "New" and "Edit..." buttons. The list shows two users: Alice o and Bob. The bottom of the screen displays "1 to 2 of 2" and an "Activate Windows" watermark.

Milestone 6: Assigning users to the roles

Activity-1: Assign Roles to Bob (Team Member)

1. Open ServiceNow.
2. Click on All → search for Users.
3. Select Team Member user (Bob).
4. Under Team Member profile, click Edit.
5. Select Team Member role and assign table role.
6. Save the changes.
7. Click on the profile icon → Impersonate user Bob.
8. Verify that Bob can access Task Table 2 with restricted permissions.

Milestone 7: Application Security & Access Enforcement

Activity-1: Assign Table Access to Application

1. When creating a table, ServiceNow automatically generates an application and module for that table.
2. Go to Application Navigator and search for Project Table application.
3. Click on Edit Module.
4. Assign Project Member role to the Project Table application.
5. Search for Task Table 2 application.
6. Click on Edit Application.
7. Assign both Project Member role and Team Member role to the Task Table 2 application.

Milestone 8:ACL

Activity-1:Create ACLs for Task Table 2

- 1.Open ServiceNow.
- 2.Click on All → search for ACL.
- 3.Select Access Control (ACL) under System Security.
- 4.Click on Elevate Role.
- 5.Click on New to create a new ACL.
- 6.Fill in the following details:
 - Table: Task Table 2
 - Role: Team Member
- 7.Scroll down to Requires Role and insert the Team Member role.
- 8.Click Submit.
- 9.Similarly, create four ACLs for the following fields:
 - Status
 - Comments

- Assigned To
- Description (if required)

Warning: A role, security attribute, data condition, script or ACL control via reference fields is required to properly secure access with this ACL.

* Type: record
 Operation: read
 Decision Type: Allow If
 Admin overrides: ☒
 Protection policy: -- None --
 * Name: Task Table 25 [u_task_table_2]
 Description:
 Applies To: No. of records matching the condition: 0 @
 Add Filter Condition Add OR Clause
 -- choose field -- -- oper -- -- value --

Conditions

Access Control Rules have two decision types, and these types will behave differently depending on conditions.
 1. Allow Access: Allows access to a resource if all conditions are met. Additional ACLs may grant access to records where this ACL has not granted access.
 2. Deny Access: Denies access to a resource unless all conditions are met. Additional ACLs may not grant access to records where this ACL has denied access.
[More Info](#)

Requires role:
 Role:

Milestone 9:Automation & Workflow Optimization

Activity-1: Create a Flow to Assign Operations Ticket to Group

1.Open ServiceNow.

2.Click on All → search for Flow Designer.

3. Select Flow Designer under Process Automation.

4. Click on New and select Flow.

5. Under Flow Properties, provide: o Flow Name: Task Table o Application: Global

6. Click Build Flow.

Next Step: Add Trigger

1. Click on Add a Trigger.
2. Search for Create Record and select it.
3. Table: Task Table.
4. Define conditions:
 - Field: Status → Operator: is → Value: In Progress

- Field: Comments → Operator: is → Value: Feedback
- Field: Assigned To → Operator: is → Value: Bob

5. Click Done.

Next Step: Add Action (Update Record)

1. Click on Add an Action.
2. Search for Update Records.
3. In Record field, drag fields from the Data Navigation (Data pill) on the right side.
4. Table will be auto assigned.
5. Add field: Status → Value: Completed.
6. Click Done.

Next Step: Add Action (Ask for Approval)

1. Under Actions, click on Add an Action.
2. Search for Ask for Approval.
3. In Record field, drag fields from the Data Navigation (Data pill).
4. Table will be autoassigned.
5. Approval field: Status.

6.Approver: Alice (Project Manager).

7.Click Done.

The screenshot displays the ServiceNow Workflow Studio interface for configuring a workflow task named "Ask For Approval on Task Table 25". The interface is divided into several sections:

- Header:** Shows the workflow name "Task table" and its status "Active". It includes buttons for "Test", "Deactivate", and "Activate".
- Action Properties:**
 - Action:** Set to "Ask For Approval".
 - Action Inputs:**
 - * Record:** "Trigger - R... Task Table 25 R..."
 - Table:** "Task Table 25 [u_task_table_2]"
 - Approval Reason:** (Empty text field)
 - Approval Field:** "Status"
 - Journal Field:** "Select a field"
 - * Rules:**
 - Approve:** (Dropdown menu)
 - When:** "All users approve"
 - Alice:** (Text field)
 - Due Date:** "None"
- Data Panel (Right):** Displays the data structure for the workflow, including variables like "Task Table 25 Record", "Task Table 25 Table", "Run Start Time UTC", "Run Start Date/Time", "Task Table 25 Record", "Task Table 25 Table", "Action Status", "Approval State", and "Action Status".
- Footer:** Shows "Status: Published" and "Application: Global".

Functional requirements	User story	No of activity	Team member
Requirement Analysis & Planning	As a project team, I want business objectives, functional scope, stakeholder mapping & execution roadmap defined, so the project direction is clear.	2	P .Saraswathi
	As a BA, I want requirements documented properly, so planning is accurate.	2	L. Jhansi
Core Platform Setup (Users, Groups, Roles)	As an admin, I want users, groups & roles configured, so the platform foundation is ready.	3	P. Ankitha
Data & Structural Configuration	As an admin, I want data & structural elements configured, so the system supports required operations.	2	L. Jhansi
Access Assignment & Governance Enablement	As an admin, I want roles assigned to Alice (Project Manager) & Bob (Team Member), so access governance is enabled correctly.	2	P. Vennela
Application Security & Access Enforcement	As an admin, I want table access assigned to the application, so	1	P. Saraswathi

	security is enforced at the app level.		
	As an admin, I want ACLs created for Task Table, so unauthorized access is restricted.	1	P. Vennela
Automation & Workflow Optimization	As an admin, I want a flow created to auto-assign operations tickets to a group, so manual assignment effort is reduced.	1	P. Anusha
Testing & Validation	As a tester, I want workflow execution tested, so automation works correctly before go-live.	1	P. Anusha
Project Conclusion	As a team, I want to summarize outcomes & learnings, so the project closes properly.	1	P. Anusha

Advantages and disadvantages:

Advantages:

- Improves security by providing controlled access to users.
- Reduces manual errors through automated workflows.
- Simplifies user, group, and role management.
- Increases operational efficiency and saves time.
- Provides better visibility and tracking of user activities.

Disadvantages:

- Initial setup and configuration can be time-consuming.
- Requires skilled administrators for proper management.
- Complex workflows may increase implementation effort.

- Regular maintenance is needed to keep roles updated.
- Incorrect role assignments can lead to access issues.

Project conclusion:

This scenario highlights a structured approach to project management, showcasing the roles of Alice and Bob within a defined workflow. With Alice's oversight and Bob's

Execution, the team effectively collaborates to ensure project success. The use of tables organizes key information, facilitating easy tracking of projects, tasks, and progress updates. Overall, this system promotes accountability, enhances communication, and leads to the successful completion of projects.
